

Bore Cleaning Systems Supplies both custom and standard brushes for Military Cleaning or Polishing application. Bore Cleaning Systems offer a wide range of brushes for small arms cleaning, including silicon carbide and mop brushes.

Using a BCS military brush, the treated surface will result in a smoother, cleaner surface that is free from machining imperfections and less prone to fouling and corrosion. The surface will be more regular, hold oil and lubricants better and have a beautiful polished finish.

BCS Military Brush Applications

Gunsmithing / Canon barrels / Paintball barrels / Revolver cylinders / Military maintenance / Fire weapons and aircraft missile systems / Firearms barrels, chambers, and forcing cones.

Mil Spec Connections

All BCS brushes attach with screw threaded fitting, Safe & Secure with lock nut.

Small Arms Cleaning

- **SACB Series 120 Grit**

Description

Small Arms Cleaning Brushes
Calibers: 5.56 mm to 15.2 mm

The SACB Series is a resilient, flexible honing brush with a soft cutting action. Whether it's cleaning or polishing a weapon barrel. The SACB brush will provide a superior surface finish with a crosshatched pattern. Will remove all firing residues, including carbon and copper, including the Carbon Ring.

- **SAPB Series 180 Grit**

Description

Small Arms Polishing Brushes
Calibers: 5.56 mm to 15.2 mm

Using a BCS 180 Grit Silicon Carbide Brush, will remove all your barrel imperfections, polish your barrel like new. Chemicals or Solvents are No Good in these situations, all you will do is spend money and waste valuable time.

A Bore Cleaning Systems Polishing brush, will restores barrel or bore to white glove inspection level. Helps to prevent barrel pitting.

- **SAMB Series Cotton**

Description

Small Arms Mop Brushes
Calibers: 5.56 mm to 15.2 mm

Ideal for applying gun cleaner or barrel lubricant to the mop, and then push it back and forth through the bore to really soak it. They mop brushes work great because they have the ability to hold a lot of gun cleaner. They can saturate the weapon bore easily. You can't really do this with a patch. They also wipe the loose fouling out of the barrel.

Smooth Bore

Defence & Aerospace Industry

If it has a barrel or bore, Bore Cleaning Systems can clean it.

- **CSB Series**

Description

Smooth Bore Brush

Calibers: 20 mm to 240 mm

The (CSB) Cleaning Smooth Bore Brush is a resilient flexible brush with a soft action. Its unique construction allows the abrasive balls or stones to float assuring the brush will be self-aligning and self-centering to the tank or artillery bore and self-compensating for wear.

Ideally suited to removing heavy deposit from smooth tank bores and artillery bores. Within a few minutes the bore or tube will be copper free and spotless.

Cleaning Brushes 120 Grit

Within a few minutes the barrel will be copper free and spotless.

We use a 120 Grit Brush; this removes all propellant & firing residues.

Ideal for removing heavy deposit from tank barrels and artillery bores.

Polishing Brushes 180 Grit

Restores barrel or bore to white glove inspection level.

We use a 180 Grit Brush; this helps smooth out all the imperfections.

Will remove all your barrel imperfections, polish your barrel like new.

Rifled Barrel

- **CRB Series**

Description

Rifled Barrel Brush

Calibers: 20 mm to 240 mm

BCS Rifled Brushes are for use on many different Guns or Cannons. Ideally suited for weapons with a high fire rate. The BCS rifled brushes have either silicon abrasive-impregnated nylon filaments, or nylon bristles. They are specially designed for cleaning military rifled barrels.

Silicon carbide does not damage the barrel or bore. This stiff abrasive brush is made over-sized so it bends over ensuring maximum contact, the short bristles are able to get into the grooves. Nylon brushes are used for light fouled barrels

Chamber Brushes

- **CB Series**

Description

Chamber Cleaning Brush

Small: 20 mm to 75 mm

Large: 76 mm to 175 mm

A chamber cleaning brush has been developed to clean the chamber of those barrels that are not parallel. Bore Cleaning Systems offer two different sizes allowing the customer to clean all their barrel and bore chambers. Our selection includes nylon or silicon carbide chamber brushes.

Swab Mop Brushes

- **SMB Series**

Description

Swab Mop Cleaning Brush

Small: 20 mm to 240 mm

Bore Cleaning Systems lint free swab brush, can be used for either removing excess fouling from the barrel after cleaning. Or to apply the barrel protection lubricants for storage.

Depleted Uranium Rounds

In the case of any barrel firing DU rounds we recommend, using the Hepa Vac for safety reasons.
